

## Individual reflection Week 6

By Alexander Bratic

- what do I want to learn or understand better?

Continue on the subjects from previous weeks. I want to understand our session storage better and how we save data for the project. Also how everything connects and some of the back-end part that other group members have made.

- how can I help someone else, or the entire team, to learn something new?

Don't think I know something someone else doesn't. I offered on Thursday to help anyone with their task after I had finished mine.

- what is my contribution towards the team's use of Scrum?

Contributed to the meetings, planning and retrospective. I haven't had a specific role. I offer and got chosen to be Scrum master next week.

- what is my contribution towards the team's deliveries?

This week I spent a lot of time on finishing one task. It involved learning React, debugging and googling a lot of information to be able to figure out my task. I finished delivering code that makes it possible to click on item images to add or remove them from the staplediagram.
