

## Individual reflection

By being active and engaged in the project I hope to help my team. For my first week I will try to pitch ideas for our project and engage with other's suggestions. Here are some other things I hope to learn or improve during this course:

- Collaboration. To work in a group and cooperate efficiently
- Learn how to get information from an API and use it.
- Increase my knowledge regarding building an application. Could be coding, databases, network communication, servers et c.
