

Individual reflection Week 3

By Alexander Bratic

- what do I want to learn or understand better?

How to use rest, spring, gradle et.c and how it relates to our project. Get request and such. More understanding on backend development.

- how can I help someone else, or the entire team, to learn something new?

Don't think I know something someone else doesn't, but if there is something new to learn I can offer to study it and then show everyone else.

- what is my contribution towards the team's use of Scrum?

I don't feel like I've contributed to the use of scrum. I should help more with the user stories and give more feedback.

- what is my contribution towards the team's deliveries?

This week it's been the same as question 1, but I should also add something concrete to the repository. I aim to finish the user story regarding the configuration of server local host.
