Individual Reflections week 2

After a successful presentation the team is ready to star working with the project.
The whole group thinks that we have a good project idea, and thats a good start!

For our web application we are going to use technologies such as html css and http.
The level of experiences within the group is different as we all have different programing background. Im looking foreword to learn new programing languages and working on the project using the Agile working method. To reach our goals and get a good finished product that the whole group is satisfied with, its important that we work as a team and learn from each other.

1. I want to learn html, css and http to be able to contribute to the project.
2. Participate in weekly retrospective meeting.
3. Working on weekly delivery and be active in group meeting.
4. Start working with our project.
